

Home work 10:

<https://github.com/mizaviv/WithArseni.git>

Aviv Mizrahi 208611012

This home work publish in assignment 10 folder in the github

Report:

- I needed to create db and the script stay in 'all\_scripts.sql'
- App.py this is the main program – start the flask and show the main screen and do what the client asking.
- "Assignment\_bp.py" is the blue\_print code
- dbActions.py = crud – add,delete,read,update
- When user click on the search button when the boxes are empty – it shows all the exist users

Assignment10 templet: folders of HTML

Assignment.html is the main screen object

Common\_header.html is the bar line in the top

Forms.html

Static:

Css -

Js – I created sum of methods:

add user

Delete user

Update user

And also I created show add function – this is showing the add screen

ShowAdd – open the form for adding user and close the update form if it is opened already

ShowUpdate – open the form for Updating user and close the add form if it is opened already

Close update / close add – when this is open

generally can be run by a browser, and activate  
by: <http://localhost:5000> (default flask endpoint for current machine).
