

Home work 8:

<https://github.com/mizaviv/WithArseni.git>

Aviv Mizrahi 208611012

This home work publish in assignment 8 folder in the github

Report:

- I copied the css code and the images folder as well to the static
- app.py - main project. this project need to be run by py command
- forms.html - all pages inherit this file. Has basic structure for all pages.
- common\_header.html - menu bar for the all html pages.
- The site shows my personal information and has abilities to navigate between pages.
- main pages:
  - assignment8.html - main home page.
  - contact.html - contact page
  - cvGrid.html - cv page.
  - register.html - register page.
- filter - use 'lower' and 'capitalize' filters.
- include - use for the common\_header.html file.
- conditions+block are all used by inheritance of forms.html in all the main pages.
- super() is used in cvGrid
- loop example is used in common\_header.html.
- JS (in static) – a file that calling a function() that check format details.  
In this check in my web I only checked for now the password that have to be between 8 to 20 letters.
- generally can be run by a browser, and activate  
by: <http://localhost:5000> (default flask endpoint for current machine).
